

Octavio Jimenez Gonzalez - Sr. Software / Data Engineer

- **Location:** León, México
- **Email:** octaviojigo@hotmail.com
- **LinkedIn:** www.linkedin.com/in/ojg-dev
- **GitHub:** www.github.com/TavoJG

Summary

Sr. Software / Data Engineer with 6+ years of experience building Python-based backend services, data pipelines, and cloud-native solutions across e-commerce, consulting, academic, and scientific domains. Strong hands-on experience with Python, JavaScript/TypeScript, SQL, AWS, GCP, Docker, Terraform, and CI/CD practices.

I specialize in fullstack data workflows: designing APIs and backend services, integrating data sources, developing ETL/ELT pipelines, modeling relational data, and enabling analytics-ready datasets with tools such as DBT, Snowflake, BigQuery, PostgreSQL, and MySQL. I have also worked with GraphQL, REST APIs, event-driven AWS Lambda functions, and modern frontend frameworks to deliver data-driven applications end to end.

As an Applied-Sciences Master and Biotechnological Engineer, I bring an interdisciplinary perspective that blends software engineering, data analysis, statistics, and scientific rigor. I am comfortable working in English-speaking environments and collaborating with cross-functional teams from discovery to production support.

Technical Skills

- **Programming languages** Python (6 years), Javascript (5 years), Typescript (5 years), R (3 years), C++ (2 years), C# (1 year).
- **Python Frameworks:** Django (5+ years), Flask (5+ years), FastAPI (3 years).
- **Frontend Frameworks:** VueJS (5+ years), NuxtJS (4+ years), ReactJS (2+ years).
- **Backend with NodeJS:** Express/NestJS (4+ years).
- **APIs:** REST, GraphQL, OpenAPI, third-party integrations.
- **Data Engineering and Analytics:** SQL (5+ years), DBT, Snowflake, BigQuery, ETL/ELT pipelines, data modeling, data migrations.
- **Databases:** PostgreSQL (5+ years), MySQL (4 years), MongoDB (4 years), OracleDB.
- **Cloud Providers:** AWS (4 years), GCP (3 years), DigitalOcean (3 years).
- **Containerization:** Docker (5+ years).
- **IaC:** Terraform (3+ years).
- **CI/CD Pipelines:** GitHub Actions (4+ years), Jenkins (2 years).
- **Linux Systems:** Administration and scripting (5+ years).
- **Collaboration Tools:** GitHub, GitLab, and Jira (5+ years).
- **Data Science** Pandas (5+ years), R (5+ years), Inferential and Descriptive Statistics (5+ years).
- **Bioinformatics Tools:** BLAST, Clustal Omega, Biopython.

Languages

- **English:** C1 - Advanced conversational
- **Spanish:** Native

Laboral Experience

Altimetrik - Staff Engineer (2024-current)

Responsible for developing and maintaining Python AWS Lambda functions, Python-Flask services, and data pipelines to support business-critical data workflows. Worked with OracleDB and SQL-based data migrations, modifying schemas and migrating data from legacy applications into modern service-oriented flows. Integrated OpenAI API for natural language processing tasks, including automated summarization and text classification, to enhance data analysis workflows.

Universidad Iberoamericana - University Lecturer in Bioinformatics (2024-current)

Taught undergraduate bioinformatics courses covering sequence alignment, data preprocessing, statistical analysis, and bioinformatics tool development. Developed hands-on activities using Python, R, Pandas, and SQL-style analysis for genomics and biological data interpretation. Introduced students to AI-driven workflows by incorporating OpenAI API into assignments for natural language applications in scientific data analysis.

Globant - Software Engineer (2021-2024)

Maintained a Python-Django e-commerce monolith integrated with PostgreSQL and PostGIS while developing scalable FastAPI and Flask microservices. Built and supported data processing pipelines, third-party API integrations, GraphQL/REST service layers, and event-driven AWS Lambda functions. Collaborated in CI/CD-driven delivery processes using GitHub, GitLab, Docker, and cloud-based environments.

Corus E3 Consulting - Software Engineer (2021)

Developed Python-Flask backend microservices and integrated them with Google Cloud Platform products, including cloud-hosted MySQL databases. Built SQL-backed service logic, API integrations, and data access layers for applications requiring reliable backend and analytics-ready data flows.

Integral Project IT - Staff Engineer (2019-2021)

Developed a web-based Vessel Traffic Management System and a real-time Weather Information System using Python-Django, Flask, JavaScript, and PostgreSQL. Implemented data pipelines, backend services, database models, and frontend features for operational data visualization and monitoring. Supported Linux-based deployments and automation scripts for production environments.

Education

- **Applied Sciences Master** — Universidad de Guanajuato (2017-2019)
 - *Cytotoxic effect of nanoparticles in human cells*
 - * Statistical Analysis in R and Python
 - * Bioinformatic analysis of tumor markers
 - * Data analysis workflows with structured datasets
- **Biotechnological Engineer** — Instituto Politécnico Nacional (2012-2016)
 - *Image reconstruction from spectral data for pharmaceutical quality control*

* Big Data analysis in R, MATLAB and Python
